

Prepare for power & water outages

- Charge all electronic devices and back up batteries.
- Fill your bathtub with water to clean and flush toilets.
- Turn your fridge to its lowest temperature.
- Preserve cell phone battery life.
- Stay away from low-hanging or downed power lines.

Here's what to expect as water starts to return...

Low pressure – while demand is high.

Air locks – these can happen, but running your taps for a short while can help water flow again.

Discoloured water – this is normal after a supply interruption, and is only temporary.

If your water is cloudy – try leaving it in a glass for a few minutes to see if it clears.

If your water is brown or black
– run your tap for a few minutes. If this doesn't work, turn tap off, and try again in 20 minutes.

HOW TO FLUSH IN A WATER OUTAGE

1 YOU CAN
USE:

SAVED WATER
FROM BATHTUB

POOL WATER

MELTED SNOW

2 REMOVE THE TANK
LID AND FILL IT WITH
WATER UNTIL IT
REACHES THE
OVERFLOW LINE

3 FLUSH
NORMALLY
